

ChagimChelper User Manual

Welcome to ChagimChelper!

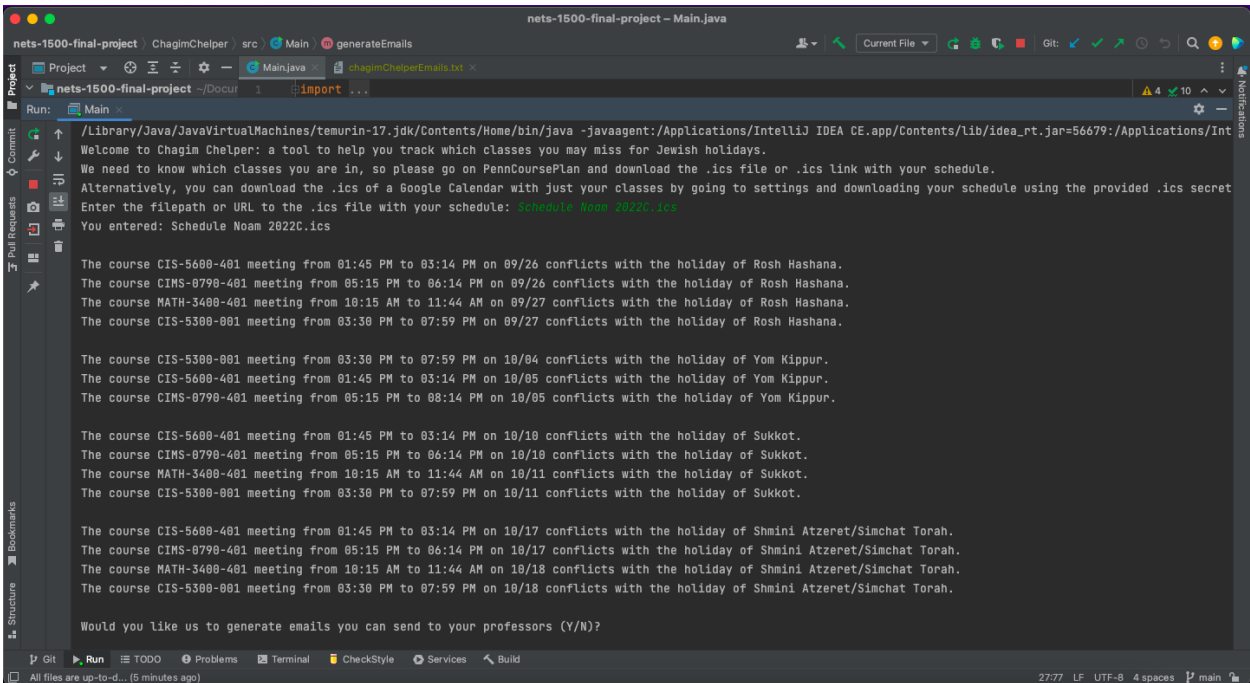

1. To begin using our program, run the Main.java file in IntelliJ:
 - a. You may need to update your Java version; we have developed for Java 17, but later versions should also work.

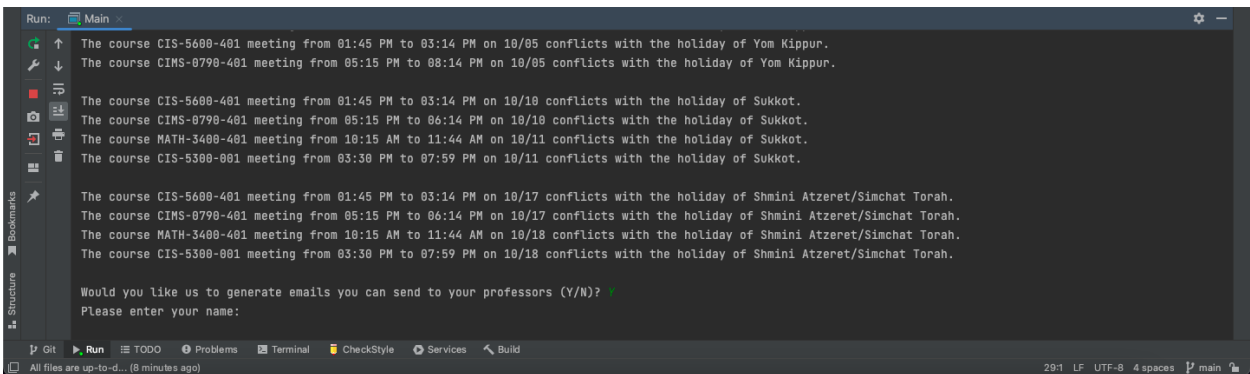

2. After successfully building and running, the following terminal output shows up and you are prompted to enter the file path to your .ics file of your schedule. There are several sample schedules provided in the “sample_schedules” folder. URLs of some sample schedules are also provided in the “Sample links.txt” file.
 - a. You can see what these schedules look like in the “Images of schedules” subfolder

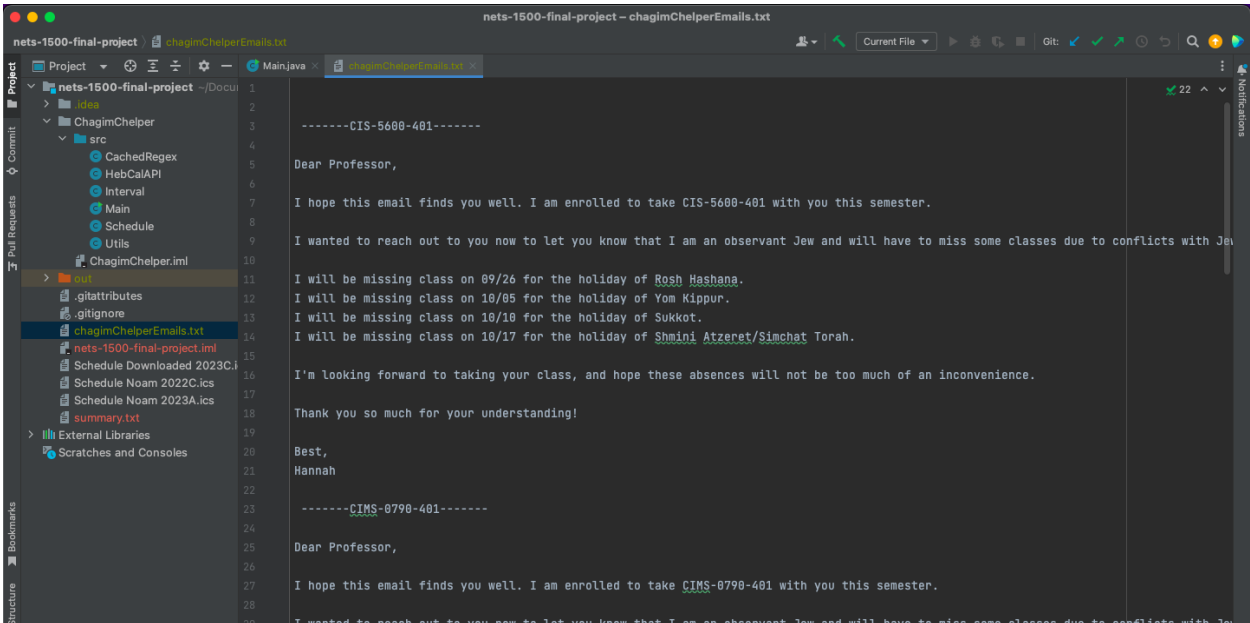

3. Here we use one of the sample schedules. After hitting ‘Enter’ you will receive output listing the conflicts each of your classes have with each of the Jewish holidays:

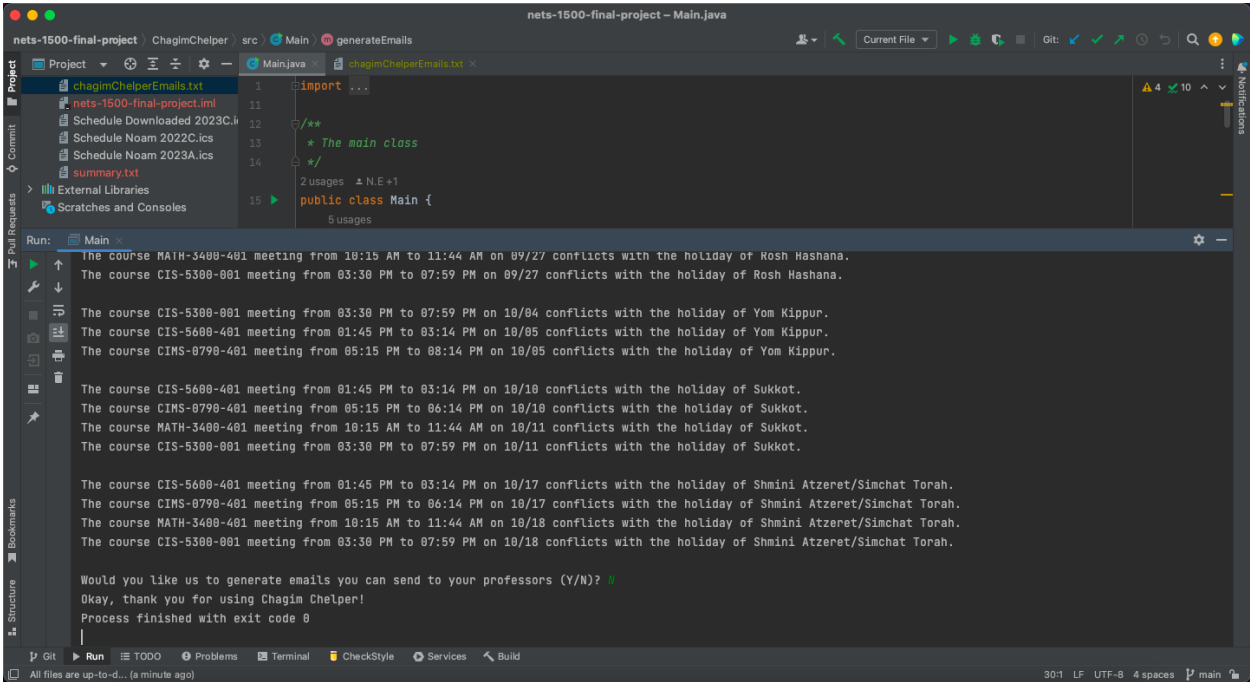

4. At the bottom of this output you can choose whether or not to generate emails to your professors.
- a. To opt in, type ‘Y’ and see the following:

After typing in your name, you can open the file “chagimChelperEmails.txt” where you will find the emails written for your convenience:

b. To opt out, type ‘N’ and see the following:

Thanks for using our program! Good luck with your courses!
